

Multi-headed Lattice Green Function (N = 4, M = 2)

Find Minimal REC

In[]:= **NN = 4;**
MM = 2;

Recall some basic definitions in the paper:

$$P_{M,N}(z) := \frac{1}{(2\pi)^N} \int_{-\pi}^{\pi} \cdots \int_{-\pi}^{\pi} \frac{1}{1 - \frac{z}{\binom{N}{M}} \sigma_M(\cos \theta_1, \dots, \cos \theta_N)} d\theta_1 \dots d\theta_N$$

$$R_{M,N}(z) := P_{M,N} \left(2^M \binom{N}{M} z \right) \text{ and } R_{M,N}(z) = \sum_{n \geq 0} r_{M,N}(n) z^n$$

Also, for M odd or $M = N$, we always have $r(2n+1) = 0$. Hence, define

$$\tilde{r}_{M,N}(n) := r_{M,N}(2n) \text{ and } \tilde{R}_{M,N}(z) := \sum_{n \geq 0} \tilde{r}_{M,N}(n) z^n = \sum_{n \geq 0} r_{M,N}(2n) z^n$$

Our goal is to find:

Case 1. M even and $M \neq N$:

- minimal recurrences (REC) for $r(n)$.

Case 2. M odd or $M = N$:

- minimal recurrences (REC) for $\tilde{r}(n)$.

Command: [UnrollRecurrence](#)

Generate a sequence from recurrence & initial values (Koutschan's implementation).

```
In[ ]:= (* given a recurrence rec in f[n], compute the values {f[0],f[1],...,f[bound]}
  where inits are the initial values
  {f[0],...,f[d-1]} with d being the order of the recurrence *)
Clear[UnrollRecurrence];
UnrollRecurrence[rec1_, f_[n_], inits_, bound_] :=
Module[{i, x, vals = inits, rec = rec1},
  If[Head[rec] != Equal, rec = (rec == 0)];
  rec = rec /. n -> n - Max[Cases[rec, f[n + a_] => a, Infinity]];
  Do[
    AppendTo[vals, Solve[rec /. n -> i /. f[i] -> x /. f[a_] => vals[[a + 1]], x][[1, 1, 2]]];
    , {i, Length[inits], bound}];
  Return[vals];
];
```

Load RISC packages.

```
In[ ]:= << RISC`HolonomicFunctions`
<< RISC`Asymptotics`
<< RISC`Guess`
```

We start by importing known ODE for $R(z)$.

Note that the ODE in Koutschan (2013, p. 9, Thm 1) is for $P(z) = R\left(z / \left(\frac{N}{M}\right) 2^M\right)$.

```
In[ ]:= ODEDiv2 =
  ToOrePolynomial[12 * z * (256 + 632 * z + 702 * z^2 + 382 * z^3 + 98 * z^4 + 9 * z^5) * P[z] + 12 *
    (-384 + 224 * z + 3716 * z^2 + 7633 * z^3 + 6734 * z^4 + 2939 * z^5 + 604 * z^6 + 45 * z^7) *
    Derivative[1][P][z] + 6 * z * (-5376 - 5248 * z + 11080 * z^2 + 25286 * z^3 + 19898 * z^4 +
      7432 * z^5 + 1286 * z^6 + 81 * z^7) * Derivative[2][P][z] + 2 * z^2 * (4 + 3 * z) *
    (-3456 - 2304 * z + 3676 * z^2 + 4920 * z^3 + 2079 * z^4 + 356 * z^5 + 21 * z^6) *
    Derivative[3][P][z] + (-1 + z) * z^3 * (2 + z) * (3 + z) * (6 + z) * (8 + z) * (4 + 3 * z)^2 *
    Derivative[4][P][z] /. {Derivative[k_][P][z] -> Der[z]^k} /. {P[z] -> 1}];
```

Process the data.

Write the ODE in terms of the operators D and θ .

```
In[ ]:= ODENormalizedinD = NormalizeCoefficients[DFiniteSubstitute[{ODEDiv2},
  {z -> w * 2^MM * Binomial[NN, MM]}, Algebra -> OreAlgebra[Der[w]]][[1]]];

In[ ]:= ODENormalizedinTheta =
  NormalizeCoefficients[ChangeOreAlgebra[w ** ODENormalizedinD, OreAlgebra[Euler[w]]]];
```

Then transform the above to a REC for $r(n)$ and write it explicitly.

```
In[ ]:= RECNormalizedinS = NormalizeCoefficients[DFiniteDE2RE[{ODENormalizedinD}, {w}, {α}][[1]]];
```

```
In[ ]:= RECNormalizedinSOrder = OrePolynomialDegree[RECNormalizedinS, S[α]]
```

```
Out[ ]:= 7
```

```
In[ ]:= ClearAll[Seq];
```

```
SeqNormalized = ApplyOreOperator[RECNormalizedinS, Seq[α]];
```

Compute the initial values of $r(n)$.

```
In[ ]:= MAX = RECNormalizedinSOrder;
```

```
ClearAll[a];
```

```
SeriesIni = ApplyOreOperator[ODENormalizedinTheta, Sum[a[n] w^n, {n, 0, MAX}]];
```

```
SeriesIniSol = Solve[Join[Table[Coefficient[SeriesIni, w, i] == 0, {i, 1, MAX}], {a[0] == 1}],  
Table[a[i], {i, 0, MAX}]]
```

```
SeqListIni = Table[SeriesIniSol[[1, k, 2]], {k, 1, Length@SeriesIniSol[[1]]}]
```

```
seq[n_] := SeqListIni[[n + 1]];
```

```
Out[ ]:= { {a[0] → 1, a[1] → 0, a[2] → 24, a[3] → 192,  
a[4] → 3384, a[5] → 51840, a[6] → 911040, a[7] → 16369920} }
```

```
Out[ ]:= {1, 0, 24, 192, 3384, 51840, 911040, 16369920}
```

Generate a list of $r(n)$.

```
In[ ]:= Bound = 200;
```

```
SeqList = UnrollRecurrence[SeqNormalized, Seq[α], SeqListIni, Bound];
```

```
seq[n_] := SeqList[[n + 1]];
```

Guess a Minimal REC for $r(n)$.

SeqfromRECGuess gives the REC in Theorem 6.1! (To be displayed at the end of this notebook)

REC: Order 5

ODE: Order 11, Degree 5

```
In[ ]:= ClearAll[Seq];
```

```
RECGuess = GuessMinRE[Take[SeqList, 200], Seq[α]];
```

```
RECGuessinS = NormalizeCoefficients[ToOrePolynomial[RECGuess /. {Seq[k_] → S[α]k-α}]];
```

```
In[ ]:= RECGuessinSOrder = OrePolynomialDegree[RECGuessinS, S[α]]
```

```
Out[ ]:= 5
```

```
In[ ]:= ODEfromRECGuessinD = NormalizeCoefficients[DFiniteRE2DE[{RECGuessinS}, {α}, {z}][[1]]];
```

```
In[ ]:= ODEfromRECGuessinTheta =
  NormalizeCoefficients[ChangeOreAlgebra[z ** ODEfromRECGuessinD, OreAlgebra[Euler[z]]]];
```

```
In[ ]:= ODEfromRECGuessinThetaOrder = OrePolynomialDegree[ODEfromRECGuessinTheta, Euler[z]]
```

```
Out[ ]:= 11
```

```
In[ ]:= ODEfromRECGuessinThetaDegree =
  Max[Exponent[OrePolynomialListCoefficients[ODEfromRECGuessinTheta], z]]
```

```
Out[ ]:= 5
```

We may also write this REC explicitly.

```
In[ ]:= ClearAll[Seq];
SeqfromRECGuess = ApplyOreOperator[RECGuessinS, Seq[α]];
```

```
In[ ]:= SeqfromRECGuessList =
  UnrollRecurrence[SeqfromRECGuess, Seq[α], Take[SeqList, RECGuessinSOrder], 200];
```

Prove the minimal REC for $r(n)$.

```
In[ ]:= RECCompare = DFinitePlus[{RECNormalizedinS}, {RECGuessinS}][[1]];
```

```
In[ ]:= RECCompareOrder = OrePolynomialDegree[RECCompare, S[α]]
```

```
Out[ ]:= 7
```

```
In[ ]:= CheckNum = RECCompareOrder + 20;
Take[SeqList, CheckNum] - Take[SeqfromRECGuessList, CheckNum]
```

```
Out[ ]:= {0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0, 0}
```

Display the REC in Theorem 6.1

```
In[ ]:= Collect[Expand[-SeqfromRECGuess], Seq[_]]
```

```
Out[ ]:= (287 649 792 + 787 304 448 α + 833 891 328 α2 + 441 427 968 α3 + 123 641 856 α4 + 17 418 240 α5 + 967 680 α6)
  Seq[α] + (708 258 816 + 1 417 457 664 α + 1 162 038 528 α2 +
  498 714 624 α3 + 117 891 072 α4 + 14 515 200 α5 + 725 760 α6) Seq[1 + α] +
  (379 157 760 + 643 100 256 α + 452 539 152 α2 + 168 897 600 α3 + 35 209 440 α4 + 3 880 800 α5 + 176 400 α6)
  Seq[2 + α] +
  (55 519 056 + 84 088 296 α + 52 997 120 α2 + 17 786 040 α3 + 3 351 200 α4 + 336 000 α5 + 14 000 α6)
  Seq[3 + α] + (-638 976 - 904 864 α - 533 288 α2 - 167 156 α3 - 29 341 α4 - 2730 α5 - 105 α6) Seq[4 + α] +
  (-345 000 - 451 000 α - 244 675 α2 - 70 540 α3 - 11 402 α4 - 980 α5 - 35 α6) Seq[5 + α]
```
